2. Interactive tables

Intermission

3. Interactive maps

Week 13: *Interactive Charts*

1. Interactive charts

2. Interactive tables

Intermission

3. Interactive maps

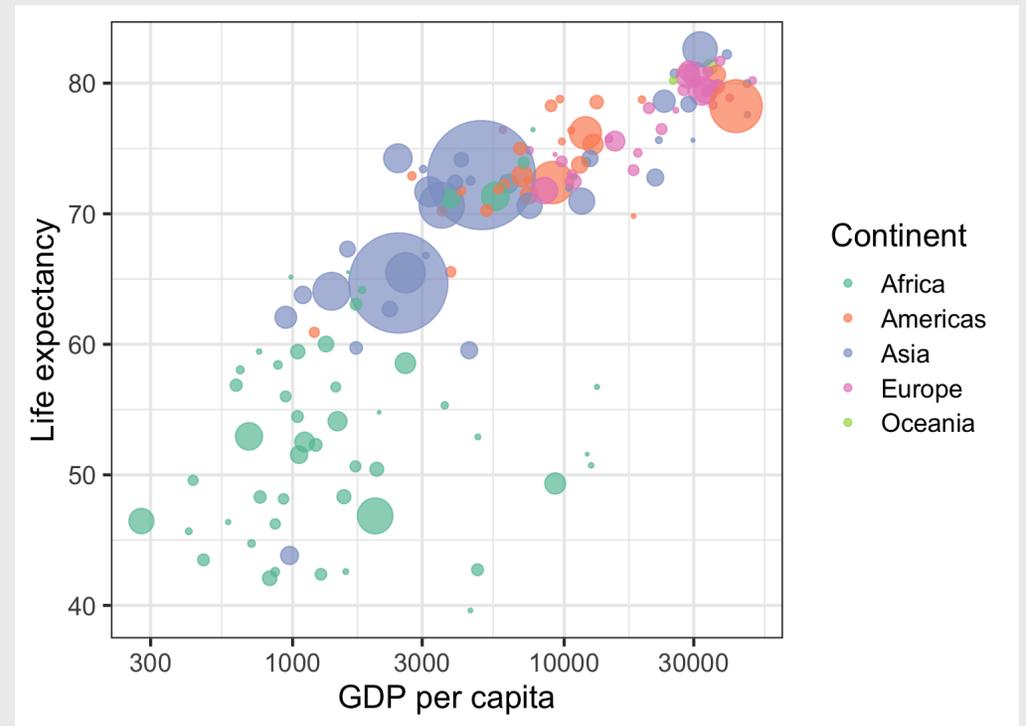

Plotly uses JavaScript to create interactive charts

But you don't have to know JavaScript to use it! 🎉

Turn any ggplot into an interactive chart with `ggplotly()`

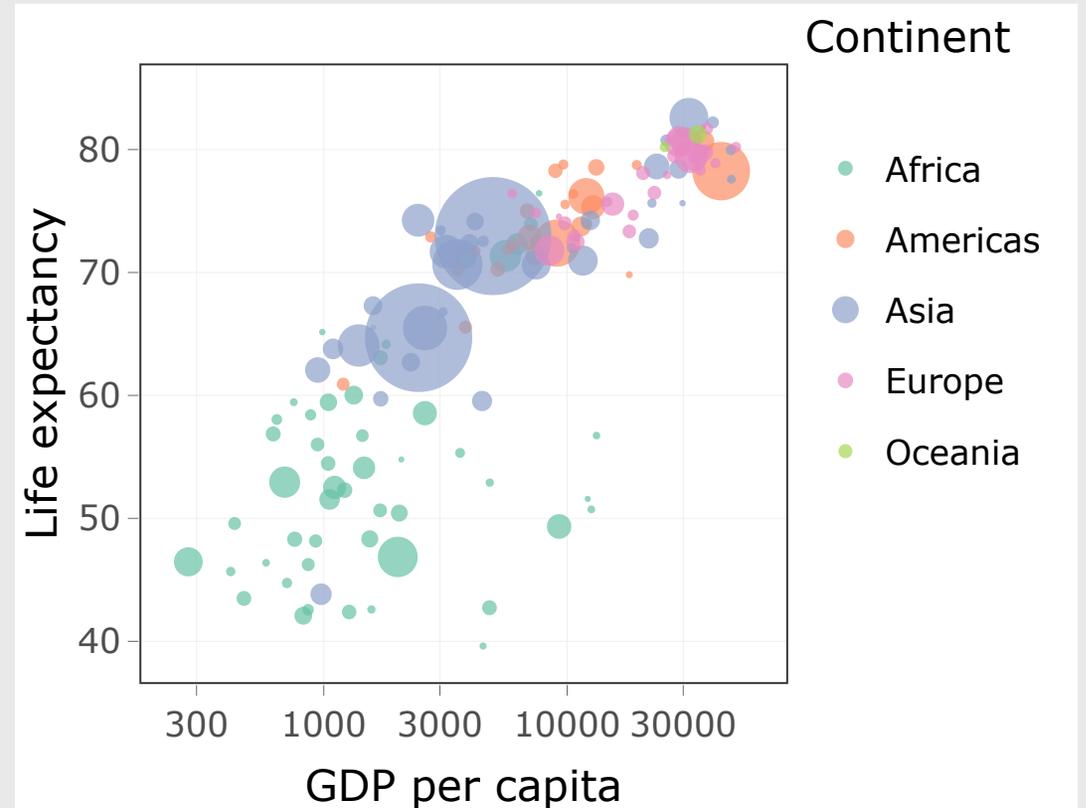

```
plot <- gapminder %>%  
  filter(year == 2007) %>%  
  ggplot(aes(x = gdpPerCap, y = lifeExp,  
            size = pop, color = continent,  
            label = country)) +  
  geom_point(alpha = 0.7) +  
  scale_color_brewer(palette = 'Set2') +  
  scale_size_area(  
    guide = FALSE, max_size = 25) +  
  scale_x_log10() +  
  theme_bw(base_size = 16) +  
  labs(x = 'GDP per capita',  
       y = 'Life expectancy',  
       color = 'Continent')
```

plot

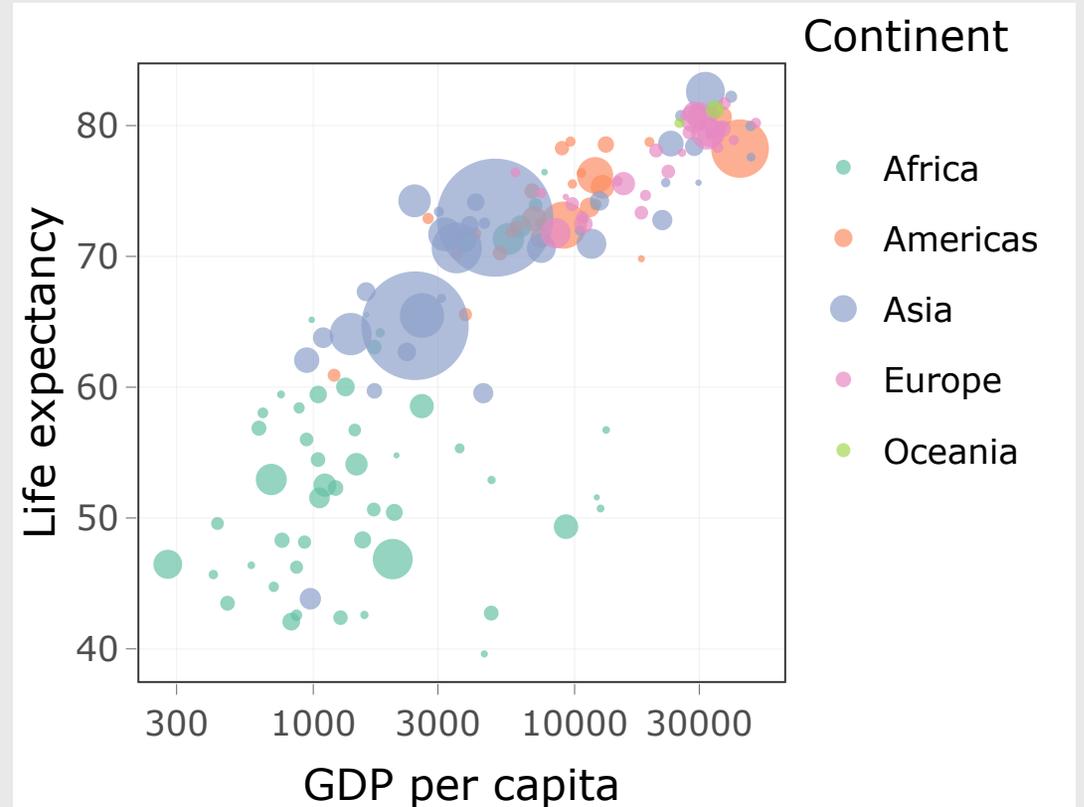

Turn any ggplot into an interactive chart with `ggplotly()`

```
ggplotly(plot)
```

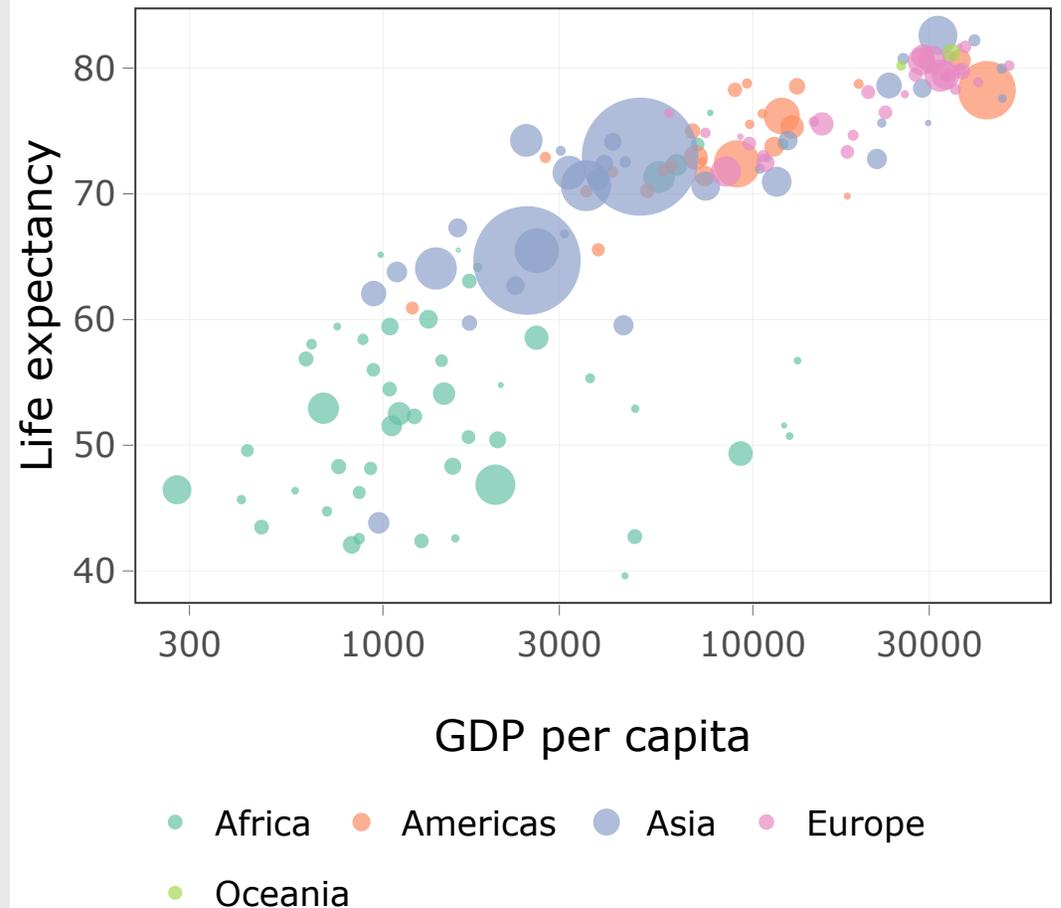

Modify the data shown with `tooltip` argument

```
ggplotly(  
  plot,  
  tooltip = c("country", "pop")  
)
```

Modify other features by piping on `plotly` functions

```
ggplotly(  
  plot,  
  tooltip = c("country", "pop")  
) %>%  
  layout(legend = list(  
    orientation = "h", x = 0, y = -0.3))
```

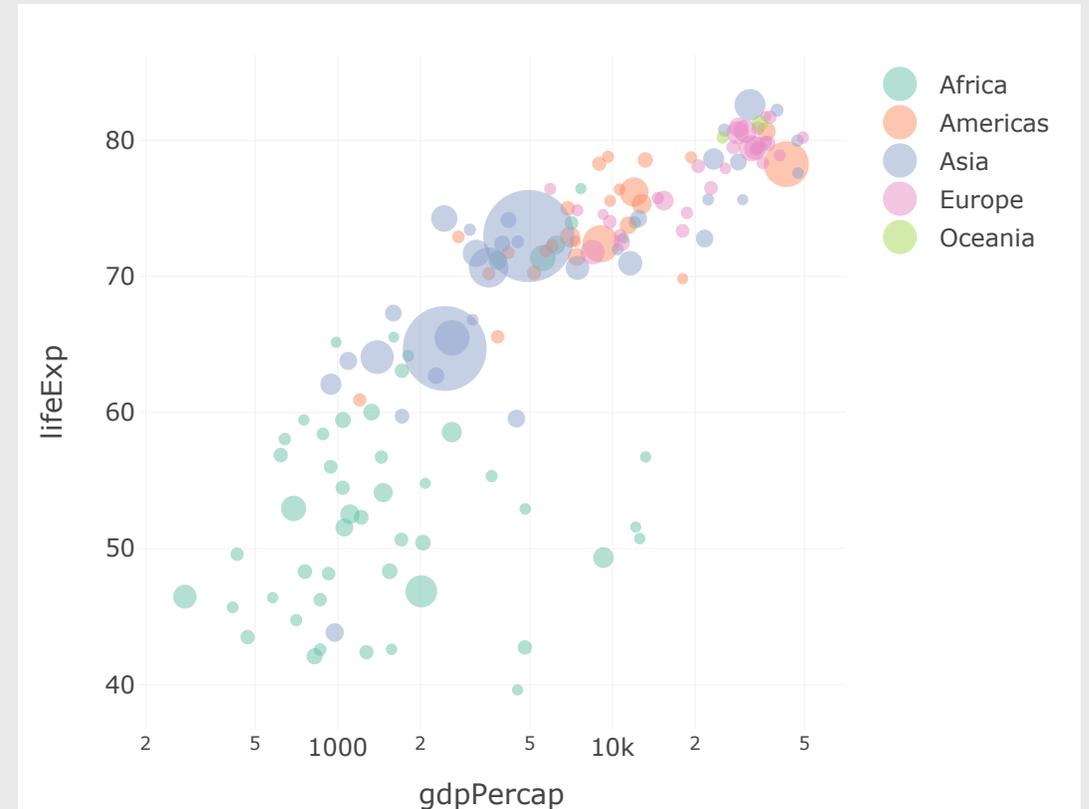

Reference guide: <https://plotly.com/ggplot2/>

Make interactive charts with `plot_ly()`

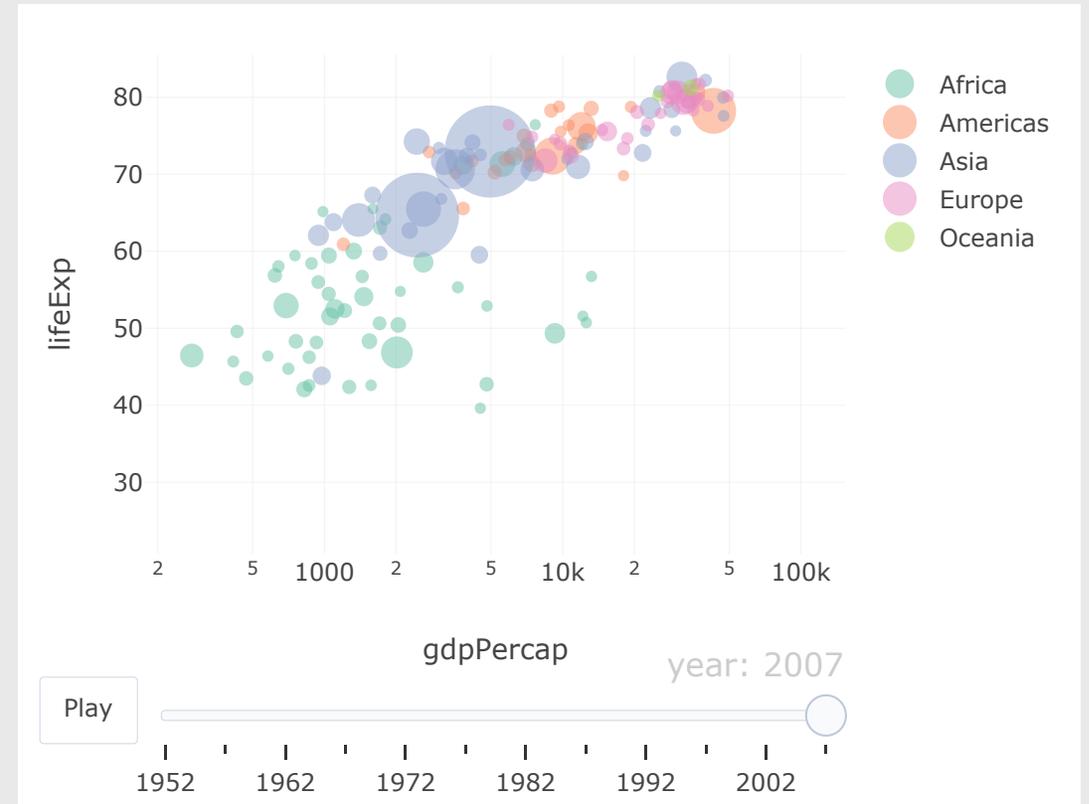

(More examples here: <https://plotly.com/r/>)

```
plot_ly(  
  data = gapminder %>% filter(year == 2007),  
  type = 'scatter',  
  x = ~gdpPercap,  
  y = ~lifeExp,  
  size = ~pop,  
  color = ~continent,  
  text = ~country,  
  mode = "markers",  
  sizes = c(10, 1000),  
  marker = list(opacity = 0.5),  
  hoverinfo = "text"  
) %>%  
  layout(xaxis = list(type = "log"))
```

Animation is relatively easy with `plot_ly()`

```
plot_ly(  
  data = gapminder,  
  type = 'scatter',  
  x = ~gdpPercap,  
  y = ~lifeExp,  
  size = ~pop,  
  color = ~continent,  
  text = ~country,  
  frame = ~year,  
  mode = "markers",  
  sizes = c(10, 1000),  
  marker = list(opacity = 0.5),  
  hoverinfo = "text"  
) %>%  
  layout(xaxis = list(type = "log"))
```

Save as html page

```
htmlwidgets::saveWidget(  
  ggplotly(plot),  
  file = here::here('figs', 'gapminder.html')  
)
```

Insert using iframe

```
htmltools::tags$iframe(  
  src      = here::here('figs', 'gapminder.html'),  
  width    = "100%",  
  height   = "400",  
  scrolling = "no",  
  seamless = "seamless",  
  frameBorder = "0"  
)
```

One more option: <https://g2r.opifex.org/index.html>

Your Turn: Interactive Charts

00:00

1. Open your reflection from this past week
2. Take turns sharing your interactive chart

Week 13: *Interactive Charts*

1. Interactive charts

2. **Interactive tables**

Intermission

3. Interactive maps

Make pretty static tables with `kable()`

```
library(knitr)
```

```
gapminder %>%
```

```
  kable()
```

country	continent	year	lifeExp	pop	gdpPercap
Afghanistan	Asia	1952	28.80100	8425333	779.4453
Afghanistan	Asia	1957	30.33200	9240934	820.8530
Afghanistan	Asia	1962	31.99700	10267083	853.1007
Afghanistan	Asia	1967	34.02000	11537966	836.1971
Afghanistan	Asia	1972	36.08800	13079460	739.9811
Afghanistan	Asia	1977	38.43800	14880372	786.1134
Afghanistan	Asia	1982	39.85400	12881816	978.0114
Afghanistan	Asia	1987	40.82200	13867957	852.3959
Afghanistan	Asia	1992	41.67400	16317921	649.3414
Afghanistan	Asia	1997	41.76300	22227415	635.3414
Afghanistan	Asia	2002	42.12900	25268405	726.7341

Behind the scenes:

`kable()` generates the code to make a pretty table

```
gapminder %>%  
  kable(format = "pipe")
```

```
|country |continent | year| lifeExp| pop| gdpPercap| |:-----|:-----  
-|----:|-----:|-----:|-----:| |Afghanistan |Asia | 1952| 28.80100| 8425333|  
779.4453| |Afghanistan |Asia | 1957| 30.33200| 9240934| 820.8530| |Afghanistan  
|Asia | 1962| 31.99700| 10267083| 853.1007| |Afghanistan |Asia | 1967| 34.02000|  
11537966| 836.1971| |Afghanistan |Asia | 1972| 36.08800| 13079460| 739.9811|  
|Afghanistan |Asia | 1977| 38.43800| 14880372| 786.1134| |Afghanistan |Asia | 1982|  
39.85400| 12881816| 978.0114| |Afghanistan |Asia | 1987| 40.82200| 13867957|  
852.3959| |Afghanistan |Asia | 1992| 41.67400| 16317921| 649.3414| |Afghanistan  
|Asia | 1997| 41.76300| 22227415| 635.3414| |Afghanistan |Asia | 2002| 42.12900|  
25268405| 726.7341| |Afghanistan |Asia | 2007| 43.82800| 31889923| 974.5803|  
|Albania |Europe | 1952| 55.23000| 1282697| 1601.0561| |Albania |Europe | 1957|
```

Behind the scenes:

`kable()` generates the code to make a pretty table

```
gapminder %>%  
  kable(format = "html")
```

```
#> <table>  
#>   <thead>  
#>     <tr>  
#>       <th style="text-align:left;"> country </th>  
#>       <th style="text-align:left;"> continent </th>  
#>       <th style="text-align:right;"> year </th>  
#>       <th style="text-align:right;"> lifeExp </th>  
#>       <th style="text-align:right;"> pop </th>  
#>       <th style="text-align:right;"> gdpPercap </th>  
#>     </tr>  
#>   </thead>  
#>   <tbody>  
#>     <tr>  
#>       <td style="text-align:left;"> Afghanistan </td>  
#>       <td style="text-align:left;"> Asia </td>
```

reactable() has some nice options!

```
library(reactable)
```

```
gapminder %>%
```

```
  reactable(
```

```
    searchable = TRUE,
```

```
    highlight = TRUE,
```

```
    filterable = TRUE,
```

```
    defaultPageSize = 5,
```

```
    showPageSizeOptions = TRUE,
```

```
    pageSizeOptions = c(5, 10, 15)
```

```
  )
```

Week 13: *Interactive Charts*

1. Interactive charts

2. Interactive tables

Intermission

3. **Interactive maps**

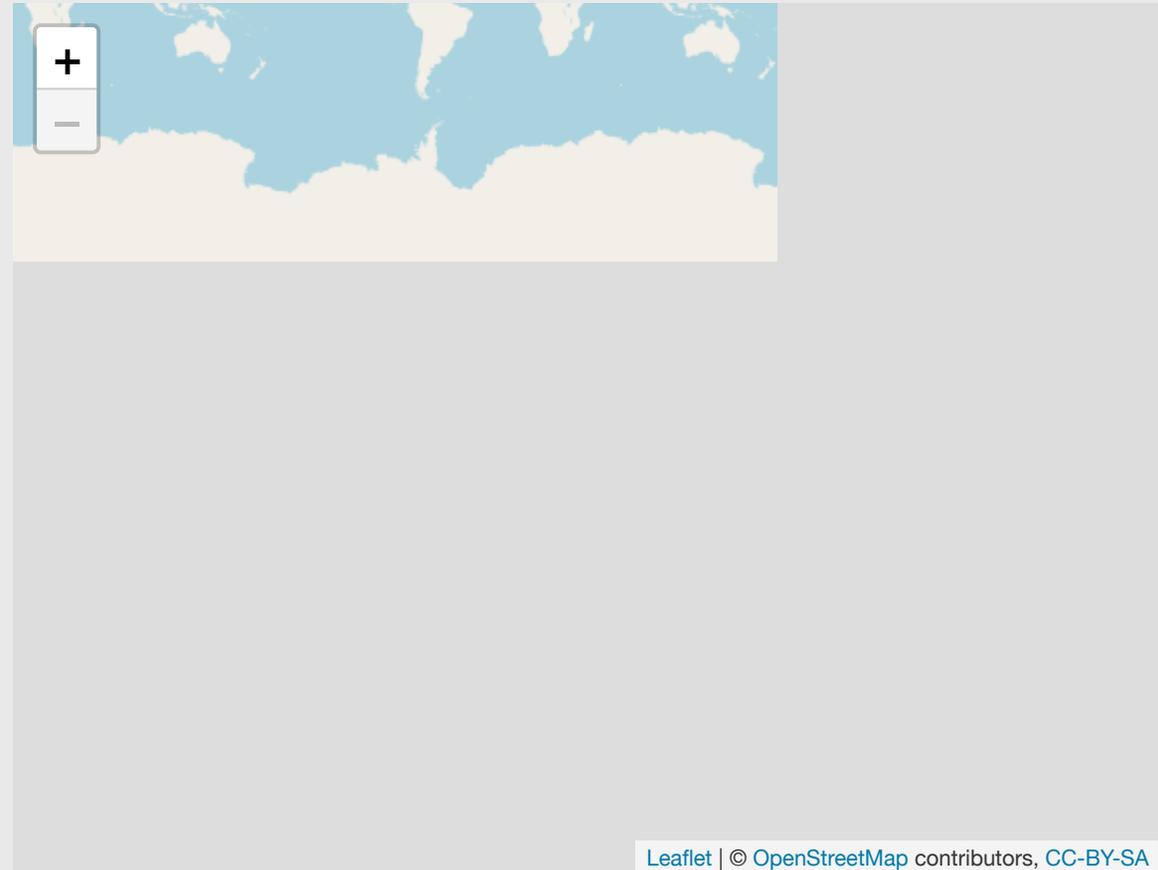

Make interactive maps with `leaflet`

```
library(leaflet)
```

```
# Default tiles: OpenStreetMap
```

```
leaflet() %>%
```

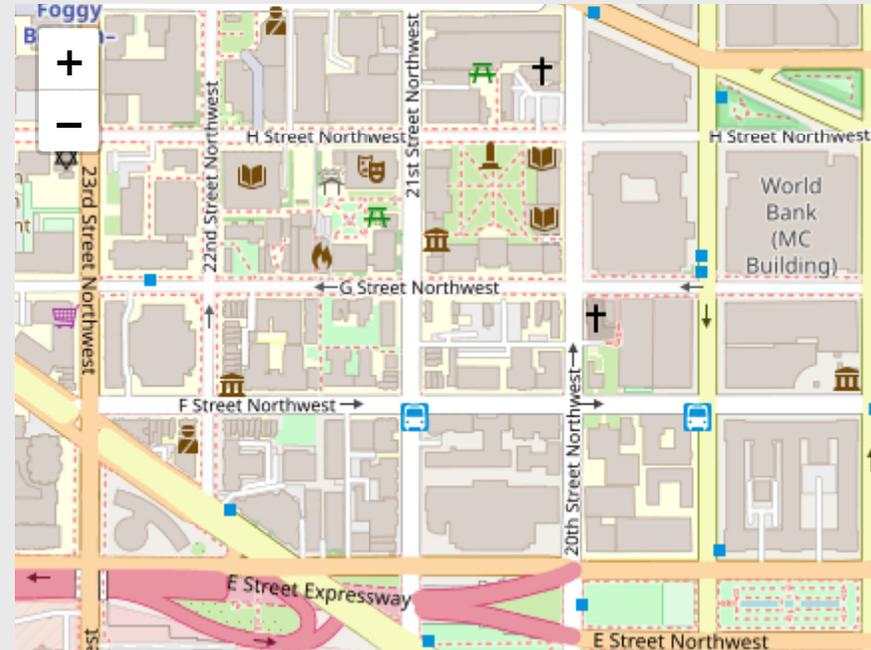

```
  addTiles()
```

Use `setView()` to set a start location

```
leaflet() %>%  
  addTiles() %>%  
  setView(  
    lat = 38.900671142379586,  
    lng = -77.05094820047492,  
    zoom = 16)
```

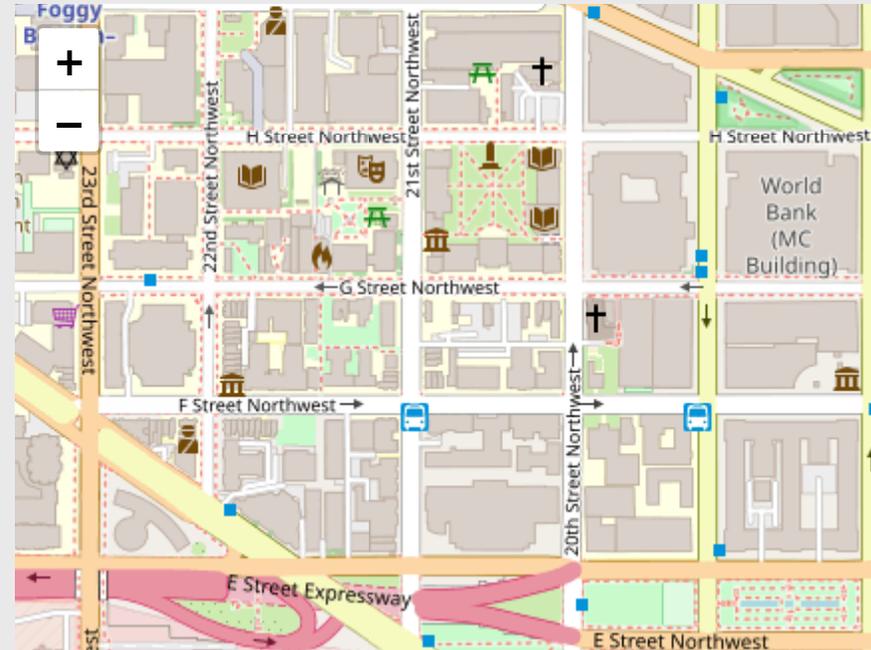

Coordinates from [Google Maps](#)

Leaflet | © OpenStreetMap contributors, CC-BY-SA

Use `addMarkers()` to add markers

```
leaflet() %>%  
  addTiles() %>%  
  setView(  
    lat = 38.900671142379586,  
    lng = -77.05094820047492,  
    zoom = 16) %>%  
  addMarkers(  
    lat = 38.900671142379586,  
    lng = -77.05094820047492,  
    popup = "GWU!!!")
```

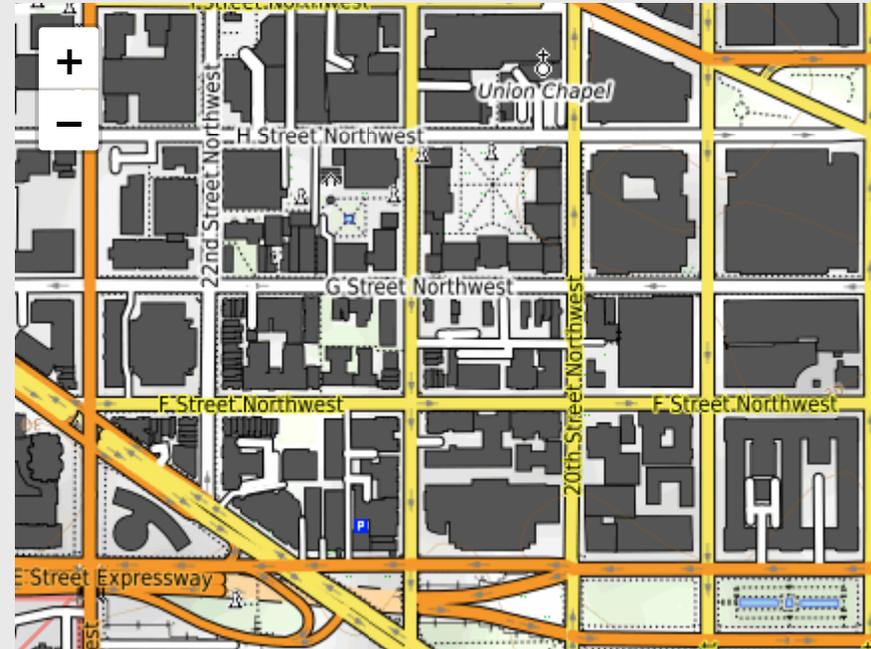

Leaflet | © OpenStreetMap contributors, CC-BY-SA

Change the tiles with `addProviderTiles()`

```
leaflet() %>%  
  # addTiles() %>%  
  addProviderTiles(providers$OpenTopoMap) %>%  
  setView(  
    lat = 38.900671142379586,  
    lng = -77.05094820047492,  
    zoom = 16) %>%  
  addMarkers(  
    lat = 38.900671142379586,  
    lng = -77.05094820047492,  
    popup = "GWU!!!")
```

Go [here](#) to get other tiles

Leaflet | Map data: © OpenStreetMap contributors, SRTM | Map style: © OpenTopoMap (CC-BY-SA)

Overlaying data with leaflet

- Points
- Choropleth maps

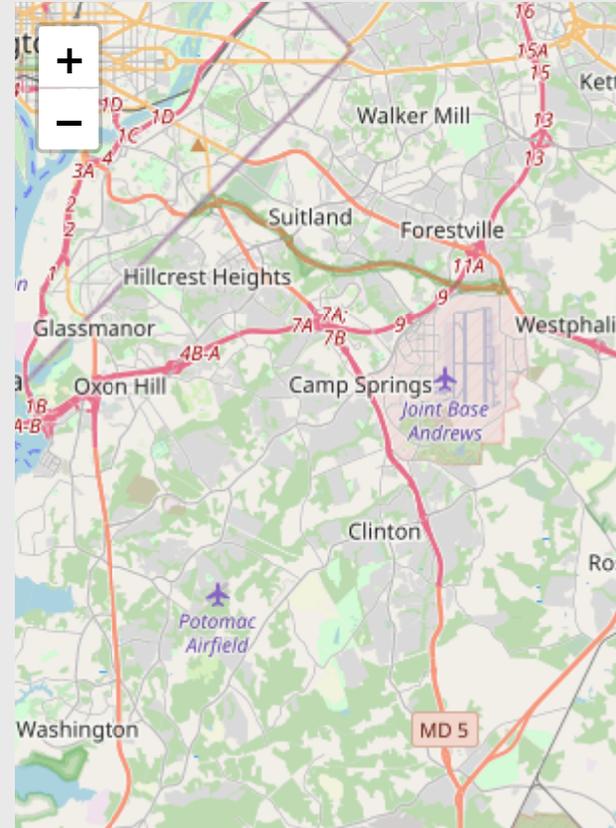

Points example: coffee data

```
coffee_shops <- read_csv(here::here("data", "us_coffee_shops.csv"))  
  
# Let's just look at MD  
dc_coffee_shops <- coffee_shops %>%  
  filter(state == "District of Columbia")  
  
head(dc_coffee_shops)
```

```
#> # A tibble: 6 x 8  
#>   name          lat  long unique_id city      state_abb zip  state  
#>   <chr>         <dbl> <dbl>    <dbl> <chr>    <chr>    <chr> <chr>  
#> 1 Baskin Robbins  38.9 -77.1  3303629 Washington DC      20008 District of Columbia  
#> 2 Baskin Robbins  38.9 -76.9  3303741 Washington DC      20019 District of Columbia  
#> 3 Baskin Robbins  38.9 -77.0  3303173 Washington DC      20002 District of Columbia  
#> 4 Baskin Robbins  38.9 -77.0  3303939 Washington DC      20003 District of Columbia  
#> 5 Baskin Robbins  38.9 -77.0  3302548 Washington DC      20009 District of Columbia  
#> 6 Dunkin' Donuts  38.9 -77.0  13589373 Washington DC      20024 District of Columbia
```

Overlay points with `addCircleMarkers()`

```
leaflet(data = dc_coffee_shops) %>%  
  addTiles() %>%  
  addCircleMarkers(  
    lng = ~long,  
    lat = ~lat,  
    popup = ~name,  
    radius = 2)
```

Leaflet | © OpenStreetMap contributors, CC-BY-SA

Make a color palette with `colorFactor()`

Make the palette

```
pal <- colorFactor(  
  palette = "Set2",  
  levels = c(  
    "Starbucks",  
    "Dunkin' Donuts",  
    "Peet's Coffee & Tea",  
    "Baskin Robbins",  
    "The Coffee Bean & Tea Leaf"))
```

`pal()` links the shop *name* to a *color*.

```
pal("Starbucks")
```

```
#> [1] "#66C2A5"
```

```
pal("Dunkin' Donuts")
```

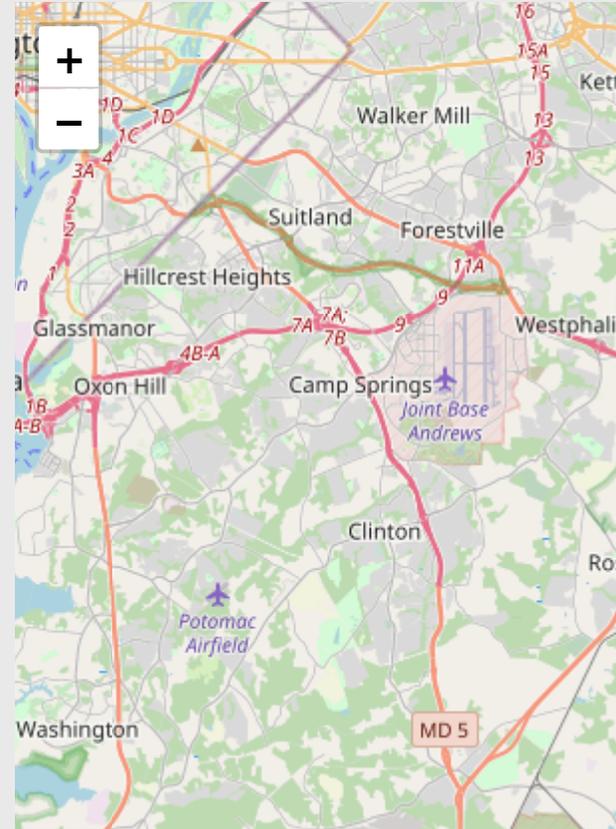

```
#> [1] "#FC8D62"
```

```
pal("Baskin Robbins")
```

```
#> [1] "#E78AC3"
```

Use `pal()` to color the points

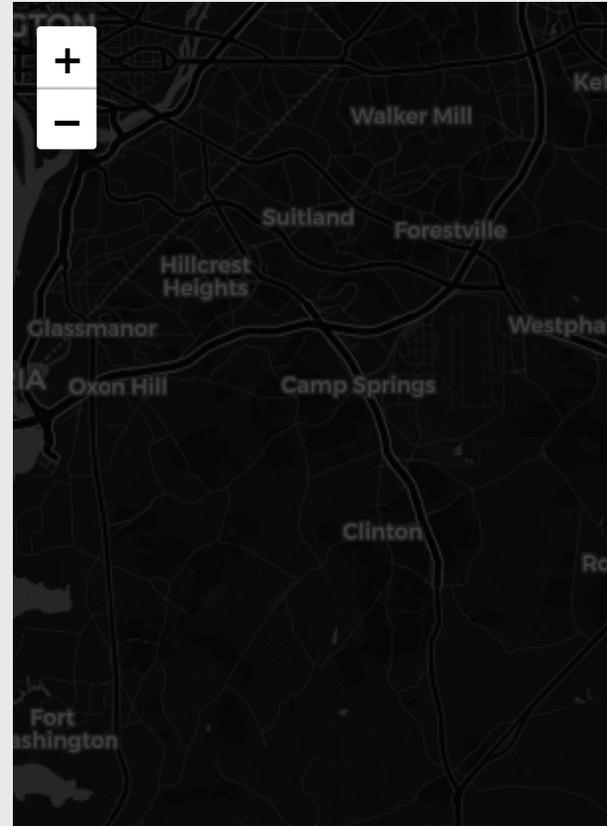

```
leaflet(data = dc_coffee_shops) %>%  
  addTiles() %>%  
  addCircleMarkers(  
    lng = ~long,  
    lat = ~lat,  
    popup = ~name,  
    color = ~pal(name),  
    radius = 2)
```

Leaflet | © OpenStreetMap contributors, CC-BY-SA

Use a dark tile scheme to make colors pop

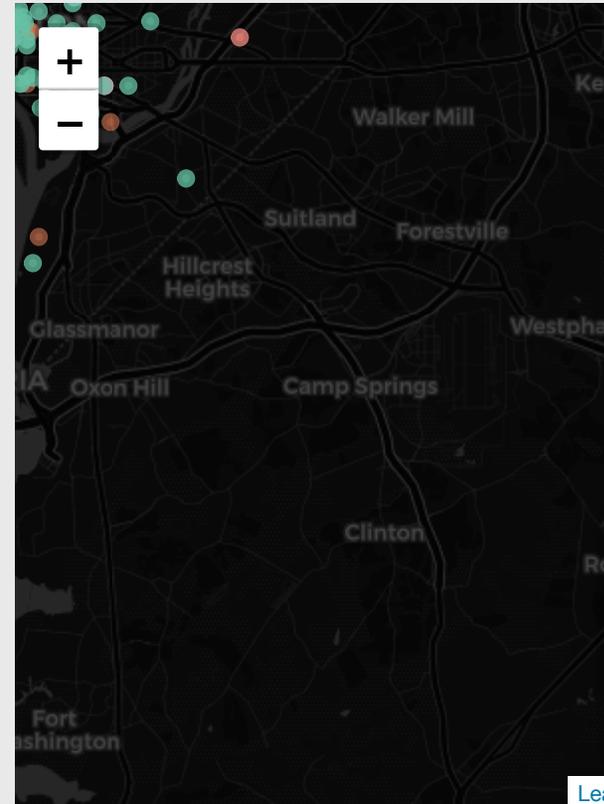

```
leaflet(data = dc_coffee_shops) %>%  
  # addTiles() %>%  
  addProviderTiles(providers$CartoDB.DarkMatter) %>%  
  addCircleMarkers(  
    lng = ~long,  
    lat = ~lat,  
    popup = ~name,  
    color = ~pal(name),  
    radius = 2)
```

Leaflet | © OpenStreetMap contributors © CARTO

Add a legend with `addLegend()`

```
leaflet(data = dc_coffee_shops) %>%  
  addProviderTiles(providers$CartoDB.DarkMatter) %>%  
  addCircleMarkers(  
    lng = ~long,  
    lat = ~lat,  
    popup = ~name,  
    color = ~pal(name),  
    radius = 2) %>%  
  addLegend(  
    position = "bottomright",  
    pal = pal,  
    values = ~name,  
    title = "Coffee Shop",  
    opacity = 1)
```

Coffee Shop

- Baskin Robbins
- Dunkin' Donuts
- Peet's Coffee & Tea
- Starbucks
- The Coffee Bean & Tea Leaf

Overlaying data with leaflet

- Points
- Choropleth maps

How to make a choropleth `leaflet` map

Get the "fill" data

```
milk_production <- read_csv(here::here(
  'data', 'milk_production.csv'))

milk_2017 <- milk_production %>%
  filter(year == 2017) %>%
  select(name = state, milk_produced) %>%
  mutate(milk_produced = milk_produced / 10^9)
```

Join to my "map" data

```
library(rnaturalearth)

state_milk <- ne_states(
  country = 'united states of america',
  returnclass = 'sf') %>%
  left_join(milk_2017, by = 'name')
```

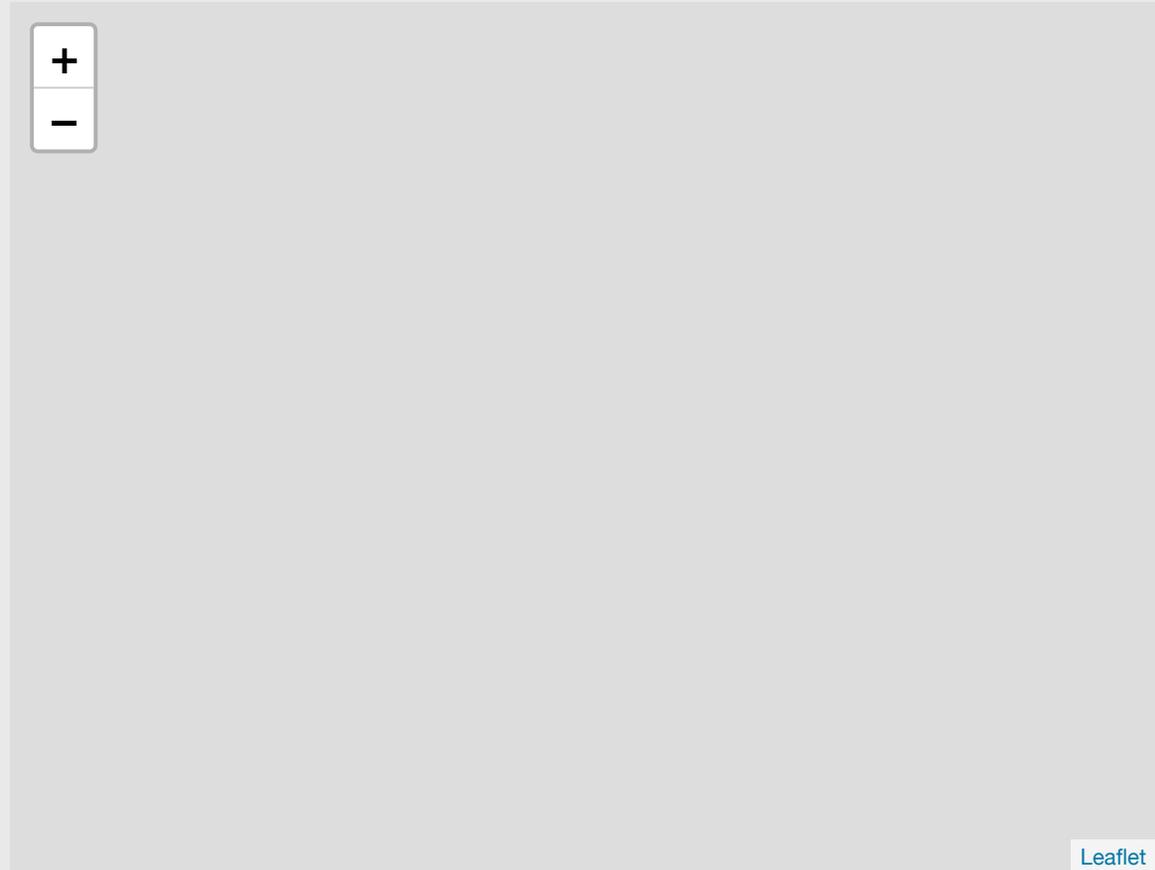

```
state_milk %>%
  select(name, milk_produced) %>%
  head()
```

```
#> Simple feature collection with 6 features and 2 fields
#> Geometry type: MULTIPOLYGON
#> Dimension: XY
#> Bounding box: xmin: -124.7346 ymin: 33.04999 xmax: -108.4500 ymax: 46.75000
#> CRS: +proj=longlat +datum=WGS84 +units=m +no_defs
#>   name milk_produced
#> 1  Minnesota      9.864
#> 2  Washington      6.526
#> 3   Idaho      14.627
#> 4   Montana       0.288
#> 5 North Dakota     0.345
#> 6   Michigan     11.231
```

Add state shapes with `addPolygons()`

Notice that I didn't include `addTiles()`

```
leaflet(data = state_milk) %>%  
  setView(-96, 37.8, 4) %>%  
  addPolygons()
```

Make a color palette with `colorBin()`

Make the palette

```
pal <- colorBin(  
  palette = "YlOrRd",  
  domain = state_milk$milk_produced)
```

`pal()` links the milk produced color:

```
pal(1)
```

```
#> [1] "#FFFFCC"
```

```
pal(10)
```

```
#> [1] "#FED976"
```

```
pal(20)
```

```
#> [1] "#FD8D3C"
```

Use `pal()` to fill the polygons

```
pal <- colorBin(  
  palette = "YlOrRd",  
  domain = state_milk$milk_produced)  
  
leaflet(data = state_milk) %>%  
  setView(-96, 37.8, 4) %>%  
  addPolygons(  
    fillColor = ~pal(milk_produced),  
    weight = 2,  
    opacity = 1,  
    color = "white",  
    dashArray = "3",  
    fillOpacity = 0.7)
```

Manually set bins in `pal()`

```
pal <- colorBin(  
  palette = "YlOrRd",  
  bins = round(seq(0, sqrt(40), length.out =  
    domain = state_milk$milk_produced))  
  
leaflet(data = state_milk) %>%  
  setView(-96, 37.8, 4) %>%  
  addPolygons(  
    fillColor = ~pal(milk_produced),  
    weight = 2,  
    opacity = 1,  
    color = "white",  
    dashArray = "3",  
    fillOpacity = 0.7)
```

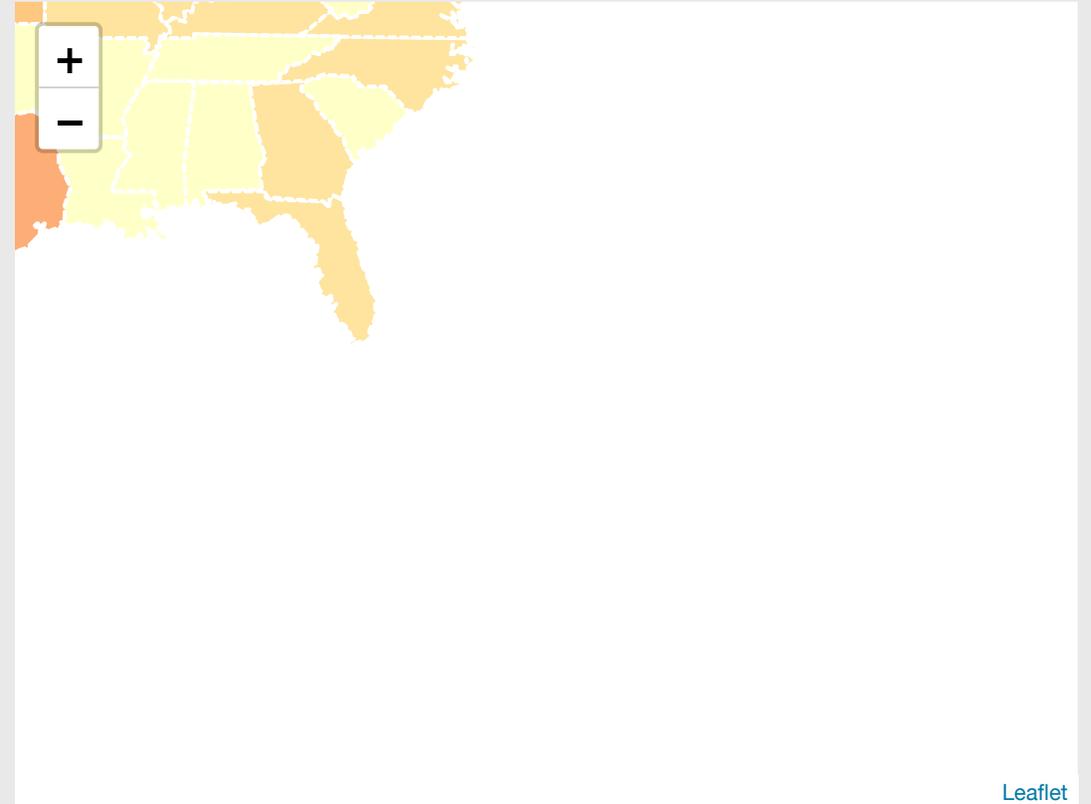

Make it interactive with `highlight` argument

```
leaflet(data = state_milk) %>%  
  setView(-96, 37.8, 4) %>%  
  addPolygons(  
    fillColor = ~pal(milk_produced),  
    weight = 2,  
    opacity = 1,  
    color = "white",  
    dashArray = "3",  
    fillOpacity = 0.7,  
    highlight = highlightOptions(  
      weight = 5,  
      color = "#666",  
      dashArray = "",  
      fillOpacity = 0.7,  
      bringToFront = TRUE))
```

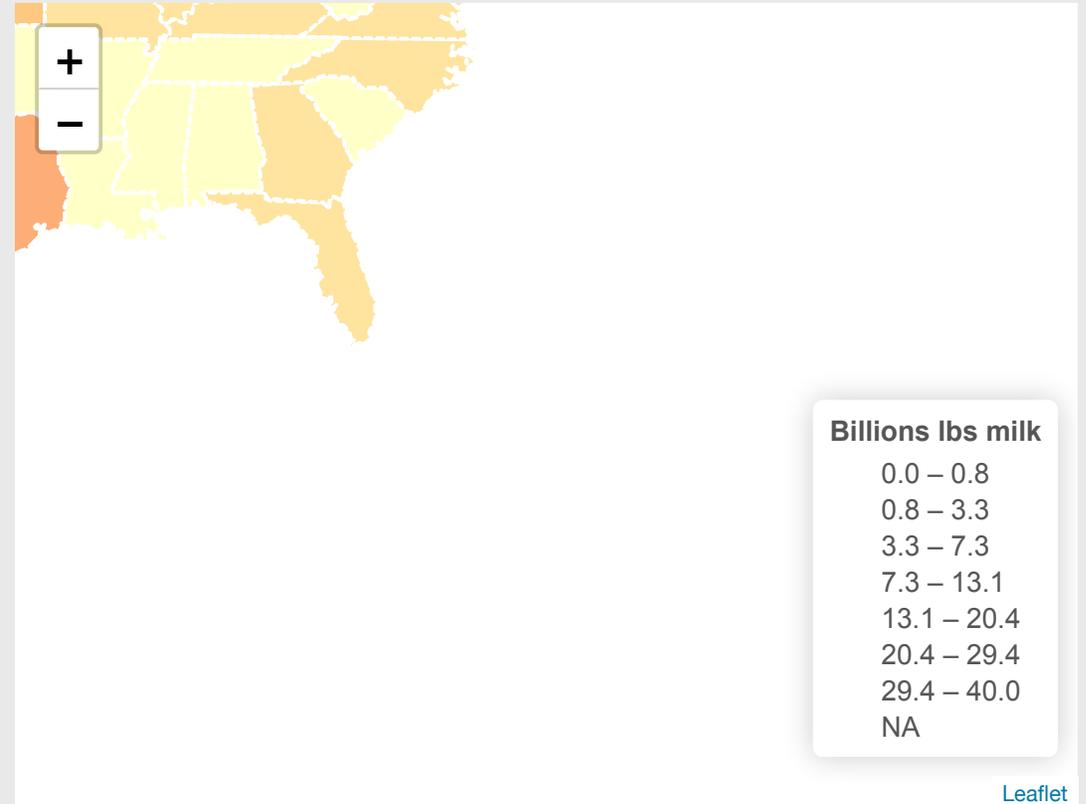

Add labels

```
state_milk <- state_milk %>%  
  mutate(label = paste(name, ":",  
    round(milk_produced, 2), " B lbs", sep = ""))  
  
leaflet(data = state_milk) %>%  
  setView(-96, 37.8, 4) %>%  
  addPolygons(  
    fillColor = ~pal(milk_produced),  
    weight = 2,  
    opacity = 1,  
    color = "white",  
    dashArray = "3",  
    fillOpacity = 0.7,  
    highlight = highlightOptions(  
      weight = 5,  
      color = "#666",  
      dashArray = "",  
      fillOpacity = 0.7,  
      bringToFront = TRUE),  
    label = state_milk$label)
```

Add a legend with `addLegend()`

```
leaflet(data = state_milk) %>%  
  setView(-96, 37.8, 4) %>%  
  addPolygons(  
    fillColor = ~pal(milk_produced),  
    weight = 2,  
    opacity = 1,  
    color = "white",  
    dashArray = "3",  
    fillOpacity = 0.7,  
    highlight = highlightOptions(  
      weight = 5,  
      color = "#666",  
      dashArray = "",  
      fillOpacity = 0.7,  
      bringToFront = TRUE),  
    label = state_milk$label) %>%  
  addLegend(  
    pal = pal, values = ~milk_produced, opacity = 0.7,  
    title = "Billions lbs milk",  
    position = "bottomright")
```

Your Turn: Interactive Maps

20:00

Use the `world_internet_2015` data frame to create this interactive leaflet map of internet access by country in 2015.

Note: I've already created the `world_internet_2015` data frame by joining the `internet_users` data frame to the `world` data frame from the `rnaturalearth` library.
