

## Week 7: Amounts \& Proportions

ini EMSE 4572: Exploratory Data Analysis
© John Paul Helveston
¿ October 12, 2022

## Tip of the week

## The fcuk package

## The fcuk package

Error message without the fcuk package:

```
maen(c(1, 2, 3, 4, 5))
```

Error in maen $(c(1,2,3,4,5))$ : could not find function "maen"

## The fcuk package

Error message without the fcuk package:

```
maen(c(1, 2, 3, 4, 5))
```

```
Error in maen(c(1, 2, 3, 4, 5)) : could not find function "maen"
```

Error message with the fcuk package:
library (fcuk)
maen(c(1, 2, 3, 4, 5))
Error in maen(c(1, 2, 3, 4, 5)) : could not find function "maen" Did you mean : mean or rename ?

## The fcuk package

Install:

```
install.packages("fcuk")
```

## Automatically load:

fcuk::add_fcuk_to_rprofile()

FC \# K (O) fcuk

Tidy data review

## Tidy data

Tidy data follows the following three rules:

- Each variable has its own column
- Each observation has its own row
- Each value has its own cell

variables

observations

values

## Next projects due:

- Mini project 2: Exploring Data (Due 10/18)
- Project progress report (Due 11/01)

## Today's data

```
avengers <- read_csv(here('data', 'avengers.csv'))
bears
federal_spending <- read_csv(here('data', 'fed_spend_long.csv'))
gapminder
lotr_words
<- read_csv(here('data', 'gapminder.csv'))
    <- read_csv(here('data', 'lotr_words.csv'))
milk_production <- read_csv(here('data', 'milk_production.csv'))
wildlife_impacts <- read_csv(here('data', 'wildlife_impacts.csv'))
```

## New packages

The \{waffle\} package

```
install.packages("waffle", repos = "https://cinc.rud.is")
```

## Week 7: Amounts \& Proportions

1. Manipulating factors
2. Graphing amounts BREAK
3. Graphing proportions

## Week 7: Amounts \& Proportions

## 1. Manipulating factors

2. Graphing amounts BREAK
3. Graphing proportions

## Sorting in ggplot is done by reordering factors

## Two ways to sort

Method 1: Use reorder() inside aesthetic mapping

```
# Format the data frame
federal_spending %>%
    group_by(department) %>%
    summarise(
        rd_budget_bil = sum(rd_budget_mil) / 10^3) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(
            x = rd_budget_bil,
            y = reorder(department, rd_budget_bil)
        ),
        width = 0.7, alpha = 0.8,
        fill = "steelblue"
    ) +
    scale_x_continuous(
        expān\overline{d}= expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## Two ways to sort

## Method 2: Use fct_reorder( ) when formatting the data frame

```
# Format the data frame
federal_spending %>%
    group_by(department) %>%
    summarise(
        rd_budget_bil = sum(rd_budget_mil) / 10^3) %>%
    mutate(
        department = fct_reorder(
            department, \overline{rd_budget_bil)) %>%}
# Make the chart
    ggplot() +
    geom_col(
        aes(x = rd_budget_bil, y = department),
        width = 0.\overline{7}, alpha}=0.8
        fill = "steelblue"
    ) +
    scale_x_continuous(
        expān\overline{d}= expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## Reorder \& modify factors with the forcats library

Loaded with library(tidyverse)

## Common situations for modifying / reording factors:

1. Reorder factors based on another numerical variable
2. Reorder factors manually
3. Modify factors manually
4. What if there are too many factor levels?

## 1. Reorder factors based on another numerical variable

## Use fct_reorder()

```
# Format the data frame
federal_spending %>%
    group_by(department) %>%
    summarise(
        rd_budget_bil = sum(rd_budget_mil) / 10^3) %>%
    mutate(
        department = fct_reorder(
            department, \overline{rd_budget_bil)) %>%}
# Make the chart
    ggplot() +
    geom_col(
        aes(x = rd_budget_bil, y = department),
        width = 0.\overline{7}, alpha}=0.8
        fill = "steelblue"
    ) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 2. Reorder factors manually

```
# Format the data frame
lotr_words %>%
    pivot_longer(
        names_to = 'gender',
        values_to = 'wordCount',
        cols =-Female:Male) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = wordCount, y = Film),
        width = 0.7, alpha = 0.8
    ) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 2. Reorder factors manually with fct_relevel( )

```
# Format the data frame
lotr_words %>%
    pivot_longer(
        names_to = 'gender',
        values_to = 'wordCount',
        cols = Female:Male) %>%
    mutate(
        Film = fct_relevel(Film, levels = c(
            'The Fel\
            'The Two Towers',
            'The Return Of The King'))) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = wordCount, y = Film),
        width = 0.7, alpha = 0.8
    ) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 3. Modify factors manually

The film names here are too long

```
# Format the data frame
lotr_words %>%
    pivot_longer(
        nämes_to = 'gender',
        values_to = 'wordCount',
        cols = Female:Male) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = wordCount, y = Film),
        width = 0.7, alpha = 0.8
    ) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 3. Modify factors manually with fct_recode( )

```
"new label" = "old label"
```

```
# Format the data frame
lotr_words %>%
    pivot_longer(
            names_to = 'gender',
            values_to = 'wordCount',
            cols = Female:Male) %>%
    mutate(
        Film = fct_recode(Film,
            'The Fellowship\nof the Ring' = 'The Fellowship Of
            'The Return\nof the King' = 'The Return Of The Kin
# Make the chart
    ggplot() +
    geom_col(
        aes(x = wordCount, y = Film),
        width = 0.7, alpha = 0.8
    ) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 2 \& 3. Modify and reorder factors manually

```
# Format the data frame
lotr_words %>%
    pivot_longer(
        names_to = 'gender',
        values_to = 'wordCount',
        cols = Female:Male) %>%
    mutate(
        Film = fct_relevel(Film, levels = c(
            'The Fellowship Of The Ring',
            'The Two Towers',
            'The Return Of The King')),
        Film = fct_recode(Film,
            'The Fellowship\nof the Ring' = 'The Fellowship Of
            'The Return\nof the King' = 'The Return Of The Kin
# Make the chart
    ggplot() +
    geom_col(
            aes(x = wordCount, y = Film),
            width = 0.7, alpha = 0.8
    ) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 4. What if there are too many factor levels?

```
# Format the data frame
federal_spending %>%
    group_by(department) %>%
    summarise(
        rd_budget_bil = sum(rd_budget_mil) / 10^3) %>%
    mutate(
        department = fct_reorder(
        department, \overline{rd_budget_bil)) %>%}
# Make the chart
    ggplot() +
    geom_col(
        aes(x = rd_budget_bil, y = department),
        width = 0.7, alphà = 0.8,
        fill = "steelblue"
    ) +
    scale_x_continuous(
        expān\overline{d}= expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 4. What if there are too many factor levels?

Strategy: Merge smaller factors into "Other" with fct_other( )

```
# Format the data frame
federal_spending %>%
    mutate(
        department = fct_other(department,
            keep = c('DOD', 'HHS', 'NIH', 'NASA', 'DOE'))) %>%
    group_by(department) %>%
    summarise(
        rd_budget_bil = sum(rd_budget_mil) / 10^3) %>%
    mutate(
        department = fct_reorder(department, rd_budget_bil))
# Make the chart
    ggplot() +
    geom_col(
        ae\overline{s}(x = rd_budget_bil, y = department),
        width = 0.\overline{7, alpha = 0.8,}
        fill = "steelblue"
    ) +
    scale_x_continuous(
        exp\overline{and}= expansion(mult =c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 4. What if there are really too many factor levels?

```
# Format the data frame
avengers %>%
    mutate(
        name_alias = fct_reorder(name_alias, appea
# Make the chart
    ggplot() +
    geom_col(
        aes(x = appearances,y = name_alias),
        width = 0.7, alpha = 0.8
    ) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 4. What if there are really too many factor levels?

Strategy: Keep top N, drop the rest with slice()

```
# Format the data frame
avengers %>%
    mutate(
        name_alias = fct_reorder(name_alias, appea
    arrange(desc(appearances)) %>%
    slice(1:10) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = appearances, y = name_alias),
        width = 0.7, alpha = 0.8
    ) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## 4. What if there are really too many factor levels?

## slice( ) works with grouping too!

```
# Format the data frame
avengers %>%
    mutate(
        name_alias = fct_reorder(name_alias, appea
    arrange(desc(appea
    group_by(gender) %>%
    slice(1:10) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(
            x = appearances,
            y = name_alias,
            fill = gender
        ),
        width = 0.7, alpha = 0.8
    ) +
    scale_x_continuous(
        expānd = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## Your turn - practice manipulating factors

Use the wildlife_impacts data to create the following plot

## Week 7: Amounts \& Proportions

1. Manipulating factors
2. Graphing amounts BREAK
3. Graphing proportions

## Show amounts with:

## Bar chart

## Lollipop chart

## Bars are good for highlighting specific categories

## Use lollipops when:

- The bars are overwhelming
- You're not highlighting categories

## Or use dots and don't set axis to 0

## How to make a Bar chart

```
# Summarize the data
federal_spending %>%
    group_by(department) %>%
    summarise(rd_budget_bil = sum(rd_budget_mil) / 10^3) %
    mutate(department = fct_reorder(department, rd_budget_
# Make chart
    ggplot() +
    geom_col(
        aes(x = rd_budget_bil, y = department),
        width = 0.7, alpha = 0.8,
        fill = 'steelblue') +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid()
```

## Filling the bars with color

```
```

# Summarize the data

```
```

# Summarize the data

federal_spending %>%
federal_spending %>%
group_by(department) %>%
group_by(department) %>%
summarise(rd_budget_bil = sum(rd_budget_mil) / 10^3) %
summarise(rd_budget_bil = sum(rd_budget_mil) / 10^3) %
mutate(
mutate(
department = fct_reorder(department, rd_budget_bil),
department = fct_reorder(department, rd_budget_bil),
is_dod = if_else(
is_dod = if_else(
departmen\overline{t}== 'DOD', TRUE, FALSE)) %>%
departmen\overline{t}== 'DOD', TRUE, FALSE)) %>%

# Make the chart

# Make the chart

    ggplot() +
    ggplot() +
    geom_col(
    geom_col(
        aes(x = rd_budget_bil, y = department,
        aes(x = rd_budget_bil, y = department,
            fill = is_dod),
            fill = is_dod),
        width = 0.7, àlpha = 0.8) +
        width = 0.7, àlpha = 0.8) +
    scale_x_continuous(
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid() +
    theme_minimal_vgrid() +
    theme(legend.position = 'none')
    ```
```

    theme(legend.position = 'none')
    ```
```

The DOD's R\&D budget is nearly the same as all other departments combined

## Filling the bars with color

```
# Summarize the data
federal_spending %>%
    group_by(department) %>%
    summarise(rd_budget_bil = sum(rd_budget_mil) / 10^3) %
    mutate(
        department = fct_reorder(department, rd_budget_bil),
        is_dod = if_else(
            department == 'DOD', TRUE, FALSE)) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = rd_budget_bil, y = department,
            fill = is_dod),
        width = 0.7, \overline{alpha = 0.8) +}
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    scale_fill_manual(values = c('grey', 'steelblue')) +
    theme_minimal_vgrid() +
    theme(legend.position = 'none')
```

The DOD's R\&D budget is nearly the same as all other departments combined

## How to make a Dot chart

Summarize data frame:

```
# Summarize the data
federal_spending %>%
    group_by(department) %>%
    summarise(
        rd_budget_bil = sum(rd_budget_mil) / 10^3) %>%
    mutāe(
        department = fct_reorder(department, rd_budget_bil))
# Make the chart
    ggplot() +
    geom_point(
        aes(x = rd_budget_bil, y = department),
        size = 2.5, color = 'steelblue') +
    theme_minimal_vgrid()
```

Dot chart of federal R\&D
spending by department

## How to make a Lollipop chart

Summarize data frame:

```
```

# Summarize the data

```
```

# Summarize the data

federal_spending %>%
federal_spending %>%
group_by(department) %>%
group_by(department) %>%
summarise(
summarise(
rd_budget_bil = sum(rd_budget_mil) / 10^3) %>%
rd_budget_bil = sum(rd_budget_mil) / 10^3) %>%
mutate(
mutate(
department = fct_reorder(department, rd_budget_bil))
department = fct_reorder(department, rd_budget_bil))

# Make the chart

# Make the chart

    ggplot()
    ggplot()
    geom_segment(
    geom_segment(
        aes(x = 0, xend = rd_budget_bil,
        aes(x = 0, xend = rd_budget_bil,
            y = department, yend = department),
            y = department, yend = department),
        color = 'grey') +
        color = 'grey') +
    geom_point(
    geom_point(
        aes(x = rd_budget_bil, y = department),
        aes(x = rd_budget_bil, y = department),
        size = 2.5, color = 'steelblue') +
        size = 2.5, color = 'steelblue') +
    theme_minimal_vgrid()
    ```
```

    theme_minimal_vgrid()
    ```
```

Lollipop chart of federal R\&D
spending by department

## Your turn - practice plotting amounts

Create the following charts:

Data: bears
Number of bear killings in each month
August is the deadliest month

Data: milk_production

## Break!

## Stand up, Move around, Stretch!

## 05 <br>  <br> 0 <br> 0

## Week 7: Amounts \& Proportions

1. Manipulating factors
2. Graphing amounts BREAK
3. Graphing proportions

## Show proportions with:

## Bar charts

2017 Milk Production by State

Pie charts
Waffle charts

## Stacked bars

```
# Format the data
milk_production %>%
    filter(year == 2017) %>%
    mutate(state = fct_other(state,
        keep = c('California', 'Wisconsin'))) %>%
    group_by(state) %>%
    summarise(milk_produced = sum(milk_produced)) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = ""', y = milk_produced, fill = state),
        width = 0.7, alpha = 0.8) +
    scale_y_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_hgrid() +
    labs(x = NULL,
        y = 'Milk produced (lbs)',
        fill = 'State',
        title = '2017 Milk Production\nby State')
```

## Stacked bars - Rotated also looks good

```
# Format the data
milk_production %>%
    filter(year == 2017) %>%
    mutate(state = fct_other(state,
        keep = c('California', 'Wisconsin'))) %>%
    group_by(state) %>%
    summarise(milk_produced = sum(milk_produced)) %>%
# Make the chart
    ggplot() +
    geom col(
        aes(x = milk_produced, y = "'", fill = state),
        width = 0.7, alpha = 0.8) +
    scale_x_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_hgrid() +
    labs(y = NULL,
        x = 'Milk produced (lbs)',
        fill = 'State',
        title = '2017 Milk Production by State')
```

2017 Milk Production by State

## Stacked bars - not great for more than a few categories

```
# Format the data
milk_production %>%
    filter(year == 2017) %>%
    mutate(state = fct_other(state,
        keep = c('California', 'Wisconsin',
            'New York', 'Idaho'))) %>%
    group_by(state) %>%
    summarise(milk_produced = sum(milk_produced))
# Make the chart
    ggplot() +
    geom_col(
        aes(x = ""', y = milk_produced, fill = state),
        width = 0.7, alpha = 0.8) +
    scale_y_continuous(
        expand = expansion(mult = c(0, 0.05))) +
    theme_minimal_vgrid() +
    labs(\overline{x = NULL,}
        y = 'Milk produced (lbs)',
        fill = 'State',
        title = '2017 Milk Production\nby State')
```

## Dodged bars

## Better for part-to-whole comparison

```
# Format the data
milk_production %>%
    filter(year == 2017) %>%
    mutate(state = fct_other(state,
        keep = c('California', 'Wisconsin'))) %>%
    group_by(state) %>%
    summarise(milk_produced = sum(milk_produced)) %>%
    mutate(state = fct_reorder(state, milk_produced)) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = milk_produced, y = state),
        width = 0.7, alpha = 0.8) +
    scale_x_continuous(
        expand = expansion(mult =c(0, 0.05))) +
    theme_minimal_vgrid() +
    labs(x = 'Milk produced (lbs)',
        y = 'State',
            title = '2017 Milk Production by State')
```

## Okay:

2017 Milk Production by State

## Better:

## Dodged bars

```
```

milk_production %>%

```
```

milk_production %>%
fi\imathler(year %in% c(1970, 2017)) %>%
fi\imathler(year %in% c(1970, 2017)) %>%
mutate(state = fct_other(state,
mutate(state = fct_other(state,
keep = c('California', 'Wisconsin'))) %>%
keep = c('California', 'Wisconsin'))) %>%
group_by(year, state) %>%
group_by(year, state) %>%
summarise(milk_produced = sum(milk_produced)) %>%
summarise(milk_produced = sum(milk_produced)) %>%

# Make the chart

# Make the chart

    ggplot() +
    ggplot() +
    geom_col(
    geom_col(
        aes(x = milk_produced,
        aes(x = milk_produced,
            y = as.factor(year),
            y = as.factor(year),
            fill = state),
            fill = state),
        position = 'dodge',
        position = 'dodge',

## The Notorious P-I-E

## Start with a bar chart

```
# Format the data
milk_production %>%
    filter(year == 2017) %>%
    mutate(state = fct_other(state,
        keep = c('California', 'Wisconsin'))) %>%
    group_by(state) %>%
    summarise(milk_produced = sum(milk_produced)) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = "'", y = milk_produced, fill = state),
        width = 0.7, alpha = 0.8) +
    theme_minimal_hgrid() +
    labs(x = NULL,
        y = 'Milk produced (lbs)',
        fill = 'State',
        title = '2017 Milk Production\nby State')
```

2017 Milk Production
by State

## The Notorious P-I-E

## Convert bar to pie with coord_polar()

```
# Format the data
milk_production %>%
    filter(year == 2017) %>%
    mutate(state = fct_other(state,
        keep = c('California', 'Wisconsin'))) %>%
    group_by(state) %>%
    summarise(milk_produced = sum(milk_produced)) %>%
# Make the chart
    ggplot() +
    geom_col(
        aes(x = ""', y = milk_produced, fill = state),
        width = 0.7, alpha = 0.8) +
    coord_polar(theta = "y") +
    theme_minimal_hgrid() +
    labs(x = NULL,
        y = 'Milk produced (lbs)',
        fill = 'State',
        title = '2017 Milk Production by State')
```

## 2017 Milk Production by State

```
# Format the data
milk_production %>%
    filter(year == 2017) %>%
    mutate(state = fct_other(state,
        keep = c('California', 'Wisconsin'))) %>%
    group_by(state) %>%
    summarise(milk_produced = sum(milk_produced)) %>%
    arrange(desc(state)) %>%
    mutate(p = 100*(milk_produced / sum(milk_produced
        label = str_c(round(p), '%')) %>%
# Make the chart
    ggplot() +
    geom_col(

Waffle chart

1970 \& 2017 Milk Production by State
(1 square $=1$ billion lbs)

## Your turn

Using the wildlife_impacts data, create plots that shows the proportion of incidents that occur at each different time of day.

For this exercise, you can remove NA values.

Try to create the following plots:

- Stacked bars
- Dodged bars
- Pie chart
- Waffle chart

To get started, you'll need to first summarize the data:

```
wildlife_summary <- wildlife_impacts %>%
    filter(!is.na(time_of_day)) %>%
    count(time_of_day)
wildlife_summary
```

```
#> # A tibble: 4 x 2
#> time_of_day n
#> <chr> <int>
#> 1 Dawn 1270
#> 2 Day 25123
#> 3 Dusk 1717
#> 4 Night 12735
```
